

Core no. 16772-1 B.C. S 1° 20.4' W 11° 58.4': 3911 m b.s.l.
16772-2 P.C. and T.W. S 1° 21.0' W 11° 57.7': 3913 m b.s.l.

Age control: Date: 09/06/1993

- *C. wuellerstorfi* and *G. ruber* ^{18}O records from -1, -2 and trigger weight (Winn et al. 1991).
 - *G. sacculifer* ^{18}O record (-1 and trigger weight, Winn et al., 1991; -2, Kähler, 1990).
 - AMS ^{14}C analogue stratigraphy.

Core fit :

- 0 cm in box core -1 = 0 cm in trigger weight -2P.
 - 27.5 cm in core -1 = 0 cm in core -2, based on fit of ^{18}O records.

Surface sediment age :

- Zero, inferred from undisturbed sediment surface in B.C. 16772-1.
 - Comparison of planktonic and benthic ^{18}O and ^{13}C records shows that the trigger weight yields the same results as the box core.
 - Top 9 cm of piston core 16772-2 are disturbed and show Holocene ^{18}O and ^{13}C levels in planktonic and benthic foraminifers.

Age/depth correlation :

Comp. depth	Calendar years		Sed.rate	Original interval/ material/	Core no.	Remarks
[cm]	[ka]		[cm/ky]	$\delta^{18}\text{O}$ stratigraphy		
0	0		- - -			
33.75	9.8	a)	3.4	AMS ^{14}C analogue	- 1	
47.5	18.3	a)	1.8	AMS ^{14}C analogue	- 2	
104.1	29.5	a)	5.1	AMS ^{14}C analogue	- 2	

a) corrected after Bard et al. (1990).

Remarks :

- Core break at 37.5 cm comp. depth results in artificial hiatus of unknown length between core -1 and -2.
 - Corg data (L. Westerhausen/K. Winn, unpublished).
 - Sediment physical properties (K. Winn, unpublished).
