Age control:

Date : 09/2000

- *C. wuellerstorfi*, *G. bulloides*, and *N. pachyderma* sin. ^{18}O records from Jung (1996), Trauth (1995) and van Kreveld (unpublished).
- AMS ^{14}C dating on *G. bulloides* and *N. pachyderma* sin. from Jung (1996) and M. Weinelt (1997, unpublished) (Aarhus and Leibniz Labor, Kiel).

Core fit :

- 0 cm in core -6 = 0 cm in core -4, based on ^{18}O record of *G. bulloides*.

Surface sediment age :

- Zero, based on undisturbed sediment surface of B.C. -4.

Age/depth correlation core -6:

Remarks :

- Dry bulk density measurements (K. Winn, unpublished).
- ^{18}O values of *G. bulloides* have been corrected by 0.4‰ because of a systematic measurement deviation (K. Winn, unpublished).
- ^{18}O values of *N. pachyderma* sin. are strongly biased by bioturbation at 65-110 cm comp. depth.
