

Core no. RC 13-229

S 25° 30'

E 11° 18':

4191 m b.s.l.

Age control:

Date: 1991

- *G. sacculifer*, *G. inflata*, *Uvigerina*, and *C. wuellerstorfi* $\delta^{18}\text{O}$ records in Shackleton (1977), CLIMAP (1984), Oppo & Fairbanks (1987), Curry et al. (1988).
- AMS ^{14}C analogue stratigraphy.

Core fit :

- None

Surface sediment age :

- Not clear. About 5400 years, based on extrapolation of Termination I sedimentation rates.

Age/depth correlation :

Orig. depth [cm]	^{14}C age [ky BP]	Calendar years [ka]		Sed.rate [cm/ky]	Original interval/ material/ $\delta^{18}\text{O}$ stratigraphy	Remarks
0		5.4				extrapolated
14.5	9.1	9.8	a)	3.3	AMS ^{14}C analogue	b)
45	14.8	18.3	a)	3.6	AMS ^{14}C analogue	
90	26	29.5	a)	4.0	AMS ^{14}C analogue	b)

a) corrected after Bard et al. (1990).

b) Alternative stratigraphy after *Uvigerina*, 9.1 ka at 30 cm (not supported by ^{13}C values).

Remarks:

- Stratigraphy is different from Curry et al. (1988).
- Medium sedimentation rates allow for high resolution across Termination I.
- Core from deeper waters of the Cape Basin (AABW) produces ""cold"" $\delta^{18}\text{O}$ signal?"
